

MURICIDAE FROM TDSB CAMPAIGNS

Marco Oliverio

Dipartimento di Biologia e Biotecnologie “Charles Darwin”
“La Sapienza” Università di Roma, Viale dell’Università 32, I-00185 Rome, Italy

Roland Houart

Institut Royal des Sciences Naturelles de Belgique, Rue Vautier, 29, B-1000 Bruxelles, Belgium

MUREX SHELLS

rock shells, oyster drills, mussel drills, drupes

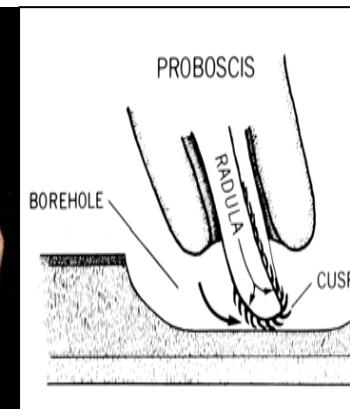

MURICIDAE Rafinesque, 1815

1600+ extant species
11 recognised subfamilies
All oceans
(including remarkable radiations in cold-temperate areas)
0-3000+ m depth range

Carnivores (mostly predators)

497 species (31% of global diversity)

44 papers (14 international journals;
15 authors)

168 new species (34%)

RAPANINAE: 2

ERGALATAKINAE: 9

CORALLIOPHILINAE: 22

MURICINAE: 45

MURICOPSINAE: 21

TROPHONINAE: 46

PAGODULINAE(*): 3

TYPHINAE: 17

TRIPTEROTYPHINAE: 3

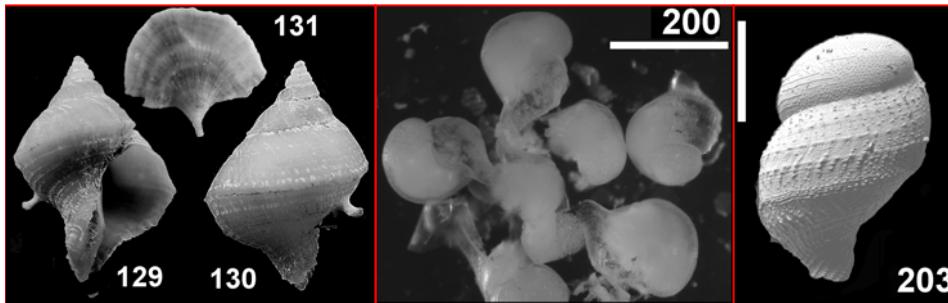

>100 m deep: 133 n. spp. (79%)

<100 m deep: 35 n. spp. (21%)

1 new subfamily (*)

Bathymetric distribution of coralliophiline diversity in the South West Pacific

The coralliophiline (Gastropoda: Muricidae) radiation: repeated colonizations of the deep sea?

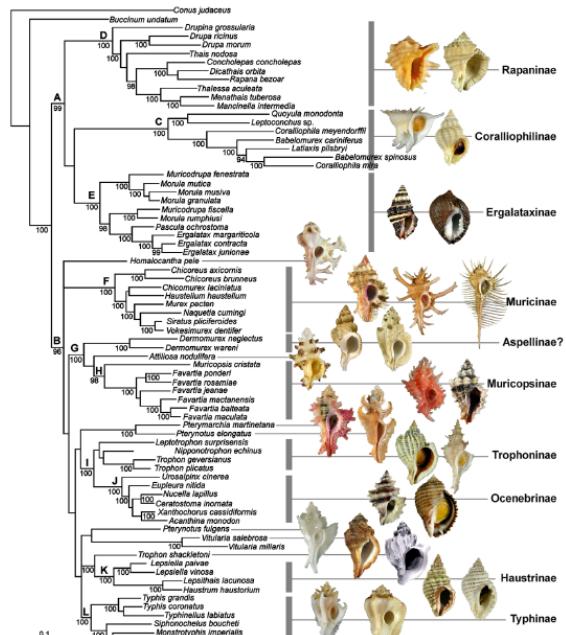

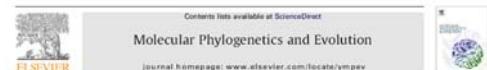

Fig. 4. Bayesian analysis (10⁷ generations, trees sampled every 1000 generations) of the combined dataset (123, 165, COI, 28S). Stationarity was reached after 1.6×10^7 generations, and a conservative burn-in of 2.5×10^7 generations was selected. Bayesian posterior probability values from 7500 trees are reported only for moderate to high support (>90%). Representative shells of each subfamily are illustrated (photo courtesy of Guido & Philippe Poole).

Molecular Phylogenetics and Evolution xxx (2010) xxx–xxx

A molecular phylogenetic framework for the Muricidae, a diverse family of carnivorous gastropods
